
I can find **SLOPE (M)** from...

Graph

Table

x	$f(x)$
-1	-2
2	4
4	8
5	10
8	16

Ordered Pairs

$(2, -3)$
 $(5, -6)$

Equation

$$y = -2x + 5$$

SLOPE (M)

$$M = \frac{\text{rise}}{\text{run}} = \frac{y's}{x's}$$

**** Check your slope! ****

Positive Slope

Negative Slope

Rate of Change

SLOPE (M)

$$M = \frac{\Delta y}{\Delta x} = \frac{\text{change in } y}{\text{change in } x}$$

RATIO - Division!

x	f(x)
-1	-2
2	4
4	8
5	10
8	16

RATIO

SLOPE (M)

$$M = \frac{\Delta y}{\Delta x} = \frac{y - y_1}{x - x_1}$$

*Remember, y goes **first** (on top)!*

*This is **opposite** of graphing ordered pairs, where you go x first (x, y).*

Ex: Find the slope of the line that passes through the points (2, -3) (5, -6)

Steepness of a Line

SLOPE (M)

Slope-Intercept Form
 $y = Mx + B$

Equation of a Line!

Ex: Find the slope:
 $y = -2x + 5$

$y = \frac{1}{4}x + 3$

$y = x$
